

For our client, manufacturing company in North of Poland, we are currently looking for:

Supplier Quality Leader

Requirements:

- Bachelors Degree in engineering,
- 3-5 years of experience in quality and/or supplier resource management
- Materials processes experience,
- Knowledge of Lean Manufacturing, Project Management, Quality Management, SCM processes, ERP systems knowledge,
- Understanding of system standards (i.e. ISO 9000, TS 16949, VDA 6.1, etc), SPC, PPAP, corrective action methodology.
- Leadership Skills Development,
- Strong analytical/ Team-oriented problem solving skills,
- Organization and time management skills.

Duties:

- Ensure that the supplier selection process is followed and improved to remain current with business needs
- Work with the business groups to rank and identify suppliers to be included in improvement activities.
- Use quality tools to drive improvements within the supply base that are sustainable.
- Ensure that the appropriate processes are followed to grow the top performing suppliers and penalize or eliminate the suppliers not performing at the required levels.
- Work with the Commodity Management and Global Sourcing personnel to focus development efforts on “Strategic” suppliers.
- Perform and improve the various audits/assessments that are used across the company. Help determine ways that best practices can be leveraged to the fullest
- Further develop and deploy the process of improving poor performing suppliers. This would include the identification, prioritization and actual improvement and development activities
- Provide on-site training, process mapping, and problem solving techniques to implement the applications and merge them with or improve existing processes.

We offer:

- International working environment,
- Interesting career path.
