

For our Client - global product leader in IT hardware solutions - we are looking for candidates for the post of:

Embedded OS QA Software Engineer

Location Warszawa

Job description:

- Software Engineering is looking for an extremely talented QA engineer to focus on international releases of our products for the market in Poland.
- You will work with an amazing team that prides themselves with innovation and a simple clean user interface. Responsibilities include running daily testing of software builds with a critical eye for usability and the ability to get to the bottom of complex issues.
- Strong regional knowledge is critical as this role requires working in local company in-country offices, focusing on regional specific functionality.
- The ideal candidate is self motivated, a strong and creative problem solver, one who pays meticulous attention to detail, is highly organized, and has exceptional communication skills. Every individual on our team makes a clear difference to our products. European travel and occasional travel to the US required.

Requirements:

- BS/MS EE/CS/CE or equivalent.
- 2+ years QA/QE or Dev experience.
- Exceptional communication skills both written and verbal.
- Self-motivated and pro-active with demonstrated creative and critical thinking capabilities.
- Flexibility to respond and react to changing priorities quickly and efficiently.
- Strong understanding of Mac OS X, Windows XP/Vista, debugging tools and Terminal.
- Strong OS fundamentals including architecture and basic coding or scripting skills. Preferably Obj C, C, C++, Perl, or shell scripting.
- Ability to write clear, concise bug reports.
- Ability to think ahead and make clear decisions on what needs to be done based on current and past priorities.
- Native or accredited in local language (Polish).
- Good understanding of software development and the QA life cycle.
- Honed experience in shipping large scale software projects.
- Working knowledge of Windows testing and troubleshooting.
- Comfortable and adaptable in a fast-paced and informal environment.
- A passion for user-focused design & leading edge consumer technology.
- Ability to contribute to tools, automation and infrastructure initiatives.
- Knowledgeable in, and sensitive to, multilingual and multicultural issues.
